

Introduction

This car rental web app is designed so that the user can use it very easily. Thus, the user can quickly and easily rent a cab rental vehicle to the desired category.

The main purpose of this is to easily book the vehicle you want in advance to suit your money. It is convenient and advantageous for the user, and the car rental company can also create and issue a schedule of vehicles required for a specific period. It saves the user's time and is great for the rental company to prepare for their order. Here the user also has the option of renting his vehicle from the location he wants, so it is more convenient for him. Through this web app, you can quickly fulfill your needs in categories that are divided into categories such as the number of seats you want. The UI design for that web app was created using Axure RP 8.
